Hampton Bay Lifetime Motor Warranty

The retailer warrants the fan motor to be free from defects in workmanship and material present at time of shipment from the factory for a lifetime after the date of purchase by the original purchaser. The retailer also warrants that all other fan parts, excluding any glass or plexiglass parts, to be free from defects in workmanship and material at the time of shipment from the factory for a period of one year after the date of purchase by the original purchaser. We agree to correct such defects without charge or at our option replace with a comparable or superior model if the product is returned to the retailer. To obtain warranty service, you must present a copy of the receipt as proof of purchase. All costs of removing and reinstalling the product are your responsibility. Damage to any part such as by accident or misuse or improper installation or by affixing any accessories, is not covered by this warranty. Because of varying climatic conditions in the United States this warranty does not cover any changes in brass finish, including rusting, pitting, corroding, tarnishing or peeling. Brass finishes of this type give their longest useful life when protected from varying weather conditions. A certain amount of wobble is normal and should not be considered a defect. Servicing performed by unauthorized persons shall render the warranty invalid. **There is no other express warranty. The retailer hereby disclaims any and all warranties, including but not limited to. Those of merchantability and fitness for a particular purpose to the extent permitted by law.** The duration of any implied warranty which cannot be disclaimed is limited to the time period as specified in the express warranty. Some states do not allow limitation on how long an implied warranty lasts, so the above limitation may not apply to you. **The retailer shall not be liable for incidental, consequential, or special damages arising out of or in connection with product use or performance except as may otherwise be accorded by law.** Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion or limitation may not apply to you. This warranty gives specific legal rights, and you may also have other rights which vary from state to state. This warranty supersedes all prior warranties.

1. Safety Rules

1. Before you begin installing the fan, **shut power off** at the circuit breaker or the fuse box.

2. Be cautious! Read all instructions and safety information before installing your new fan. Review accompanying assembly diagrams.

3. Make sure that all electrical connections comply with local codes, ordinances, or National Electrical Codes. Hire a qualified electrician or consult a do-it-yourself wiring handbook if you are unfamiliar with installing electrical wiring.

4. Make sure the installation site you choose allows the fan blades to rotate without any obstructions. Allow a minimum clearance of 7 feet from the floor and 18 inches from the tip of the blades to the wall.

5. If you are mounting the fan to a ceiling outlet box, use U.L. Listed metal octagonal outlet box marked "Acceptable for fan support". Secure the box directly to the building structure. The outlet box and its support must be able to support the moving weight of the fan (at least 50 lbs.) **Do not use a plastic box.**

6. **Caution:** To reduce the risk of personal injury use only the screws provided with the outlet box.

7. If you are mounting the fan to a joist, make sure it is able to support the moving weight of the fan (at least 50 lbs.).

8. After you install the fan, make sure that all mountings are secured to prevent the fan from falling.

9. Do not insert anything into the fan blades while the fan is operating.

10. To operate the reverse function on this fan, press the reverse button while the fan is running.

ATTENTION: The Energy Policy Act of 2005 requires this fan to be equipped with a 190 watt limiting device. If lamping exceeds 190 watts, the ceiling fan's light kit will shut off automatically.

NOTE: The important safeguards and instructions appearing in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and care are factors which can not be built into this product. These factors must be supplied by the person(s) installing, caring for and operating the unit.

NOTE

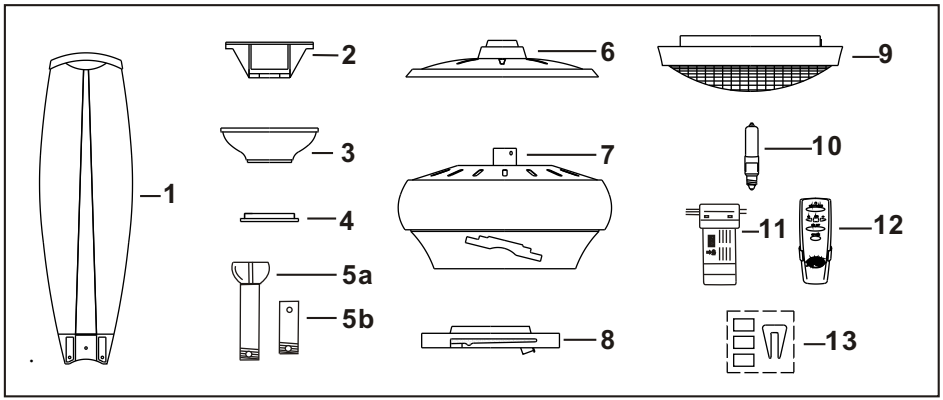
READ AND SAVE ALL INSTRUCTIONS!

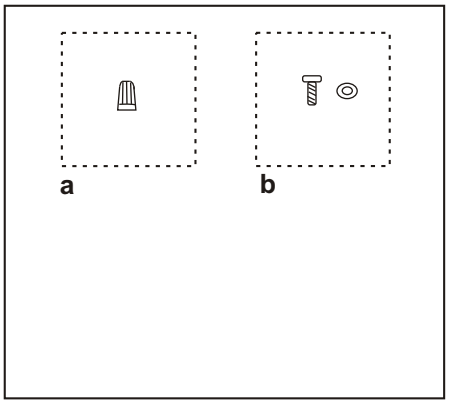
WARNING

TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR OTHER PERSONAL INJURY, MOUNT FAN ONLY TO A U.L. LISTED OUTLET BOX OR SUPPORTING SYSTEM MARKED ACCEPTABLE FOR FAN SUPPORT AND USE MOUNTING SCREWS AND LOCK WASHERS PROVIDED WITH THE OUTLET BOX, MOST OUTLET BOXES COMMONLY USED FOR THE SUPPORT OF LIGHTING FIXTURES ARE NOT ACCEPTABLE FOR FAN SUPPORT AND NEED TO BE REPLACED. CONSULT A QUALIFIED ELECTRICIAN IF IN DOUBT.

TO REDUCE THE RISK OF PERSONAL INJURY, DO NOT BEND THE BLADE HOLDERS WHILE INSTALLING, BALANCING THE BLADES, OR CLEANING THE FAN. DO NOT INSERT FOREIGN OBJECTS BETWEEN ROTATING FAN BLADES.

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT USE THIS FAN WITH ANY SOLID-STATE SPEED CONTROL DEVICE





Unpack your fan and check the contents. You should have the following items;

1 Fan blades (4)
2. Hanger bracket
3. Canopy
4. Canopy cover
5a. Standard downrod assembly
5b. Minimum-length downrod (for close to the ceiling installation only)
6. Coupling cover
7. Fan motor assembly
8. Light plate
9. Glass shade
10. 100 Watt halogen bulb
11. Receiver+6 wire nuts
12. Transmitter+holder+2 mounting screws
13. Balancing kit

a. **Mounting hardware:**
Wire nuts (3)

b. Blade attachment hardware:
Screws (13). Rubber washers (13)

Package Contents 2.

Tools Required

Phillips screw driver; slotted screw driver; step-ladder; wire cutters; electrical tape.

Mounting Options

If there isn't an existing mounting box, then read the following instructions. Disconnect the power by removing fuses or turning off circuit breakers.

Secure the outlet box directly to the building structure. Use appropriate fasteners and building materials. The outlet box and its support must be able to fully support the moving weight of the fan (at least 50 lbs.). Use a UL Listed metal outlet box. Do not use a plastic outlet box.

Figure 1, 2 and 3 are examples of different ways to mount the outlet box.

Note: You may need a longer downrod to maintain proper blade clearance when installing on a steep, sloped ceiling. Longer downrods are available from your Hampton Bay dealer.

To hang your fan where there is an existing fixture but no ceiling joist, you may need to install a hanger bar as shown in Fig. 4 (available at your Hampton Bay dealer).

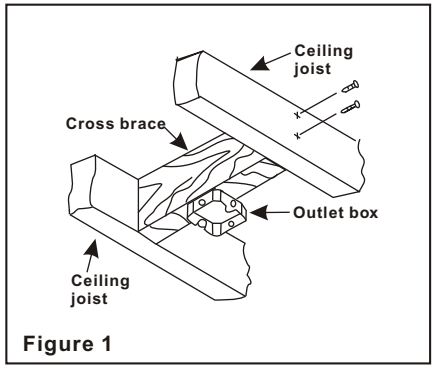


Figure 1

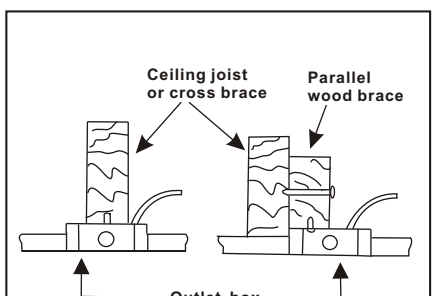

Figure 2

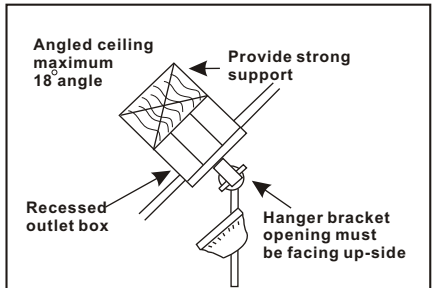

Angled ceiling maximum 18° angle
Provide strong support
Recessed outlet box
Hanger bracket opening must be facing up-side
Figure 3

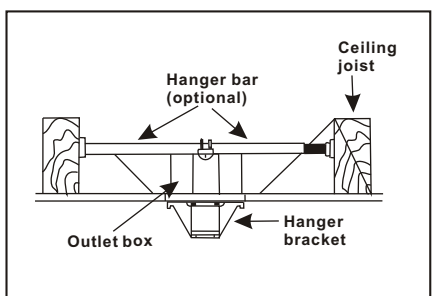

Figure 4

3. Installing Your Fan

REMEMBER to turn off the power. Follow the steps below to hang your fan properly:

Step 1. Secure the hanger bracket to the ceiling outlet box using screws and lock washers included with your outlet box. (Fig.5)

Step 2. Loosen the two set screws and remove the hitch pin and lock pin in the top coupling of the motor assembly. (Fig.6)

Step 3. Remove hanger ball from downrod assembly by loosening set screw, removing the cross pin, and sliding ball off rod. (Fig.7)

Step 4. Carefully feed fan wires up through the downrod. (Fig. 8) Thread the rod into the coupling. Next line up holes and replace lock pin and hitch pin. Tighten set screws.

Step 5. Slip coupling cover, canopy cover, and canopy onto downrod. (Fig.9) Carefully reinstall hanger ball onto rod being sure that cross pin is in correct position, set screws are tighten and wires are not twisted.

Step 6. Now lift motor assembly into position and place hanger ball into hanger bracket. Rotate until the check groove has dropped into the registration slot and seats firmly. (Fig. 10) Rod should not rotate if this is done correctly.

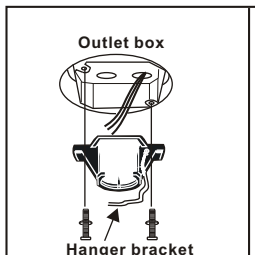

Figure 5

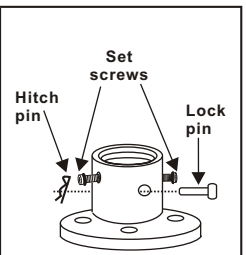

Figure 6

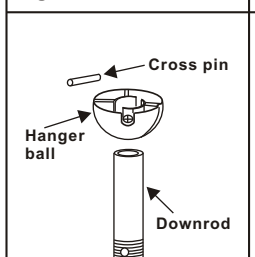

Figure 7

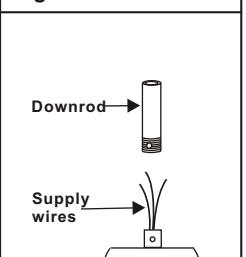

Figure 8

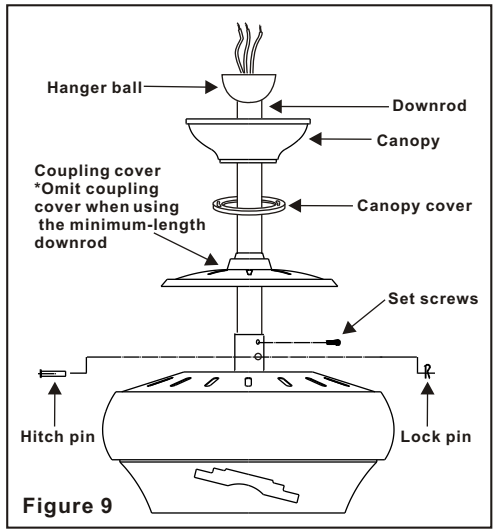

Figure 9

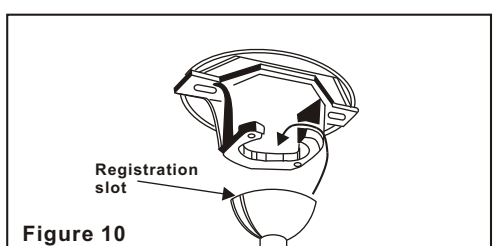

Figure 10

Hanging the Fan 4.

WARNING: To avoid possible electrical shock be sure electricity is turned off at the main fuse or breaker box before wiring.

NOTE: The Hand Held Remote or Wall Control units included with your ceiling fan are equipped with 16 code combinations to prevent possible interference from or to other remote units. The dip switches on your Receiver and Transmitter units have been preset at the factory, please re-check to make sure the switches on both units are set to the same positions. The frequency settings should be changed only in case of interference or if a second or more remote controlled ceiling fans are installed in the same structure. Any code combination will operate the ceiling fan and light as long as the Receiver and Transmitter units are set to the same codes (Fig. 11)

Step 1. Insert Receiver into Hanger Bracket with the flat side of the Receiver facing the ceiling. (Fig. 12)

Step 2. Motor to Receiver Electrical Connections: Connect the WHITE wire from the fan to the WHITE wire marked "TO MOTOR N" from the Receiver. Connect the BLACK wire from the fan to the BLACK Wire marked "TO MOTOR L" from the Receiver. Connect the BLUE wire from the fan to the BLUE wire marked "For Light" from the Receiver. **NOTE:** If your ceiling fan features an UP Light: Connect the ORANGE wire from the fan to the ORANGE wire marked "For Up Light" from the Receiver. Otherwise disregard this step and proceed to secure all wire connections with the plastic wire nuts provided. (Fig. 13)

Step 3. Receiver to House Supply Wires Electrical Connections: Connect the WHITE wire (Neutral) from the outlet box to the WHITE wire marked "AC in N" from the receiver. Connect the BLACK wire (Hot) from the outlet box to the BLACK wire marked "AC in L" from the receiver. Secure all wire connections with the plastic wire nuts provided. (Fig. 13)

Step 4. If your outlet box has a GROUND wire (Green or Bare Copper) connect this wire to the Hanger Ball and Hanger Bracket Ground wires. If your outlet box does not have a Ground Wire, then connect the Hanger Ball and Hanger Bracket Ground Wires together. Secure wire connection with the plastic wire nut provided. (Fig. 13)

After all connectors are made, check to make sure there are no loose strands. As an additional precaution we suggest to secure the plastic wire connectors to the wires with electrical tape.

Note: The transmitter only works within 40 feet from receiver.

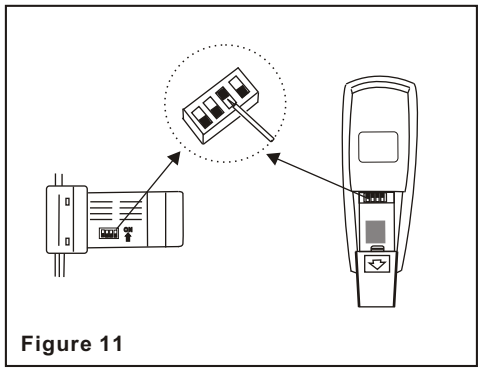

Figure 11

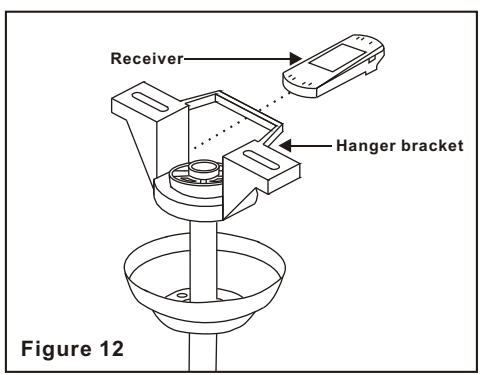

Figure 12

5. Electrical Connections

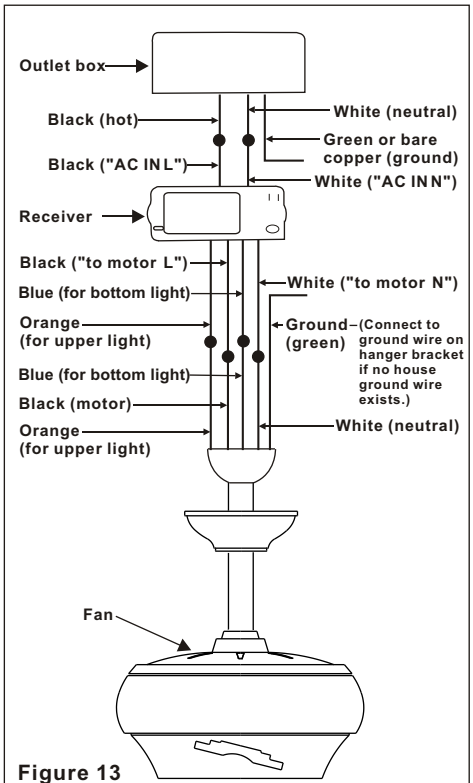

Figure 13

6. Finishing the Installation

Step 1. Tuck connections neatly into ceiling outlet box.

Step 2. Slide the canopy up to ceiling and over the two crews on hanger bracket. Rotate canopy clockwise. Next, while holding the canopy with one hand, slide the canopy cover over the screws and rotate clockwise until tight. Note: adjust the canopy screws as necessary until the canopy and canopy cover are snug. (Fig. 14)

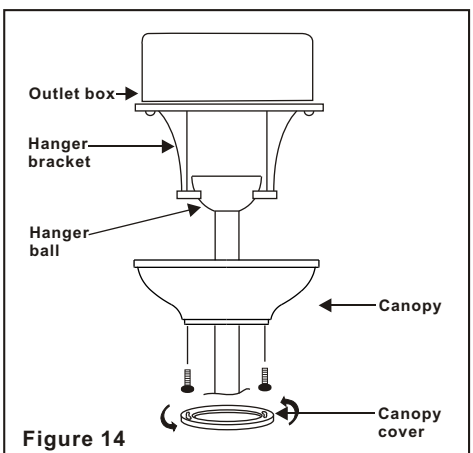

Figure 14

7. Blade Installation

Insert the blade through the slot in housing. Align holes in blade and motor and secure with 3 screws and fiber washers. Repeat process with the other blades. (Fig. 15)

All blade sets are grouped together by weight. Because natural woods vary in density, the fan may wobble even though the blades are weight matched.

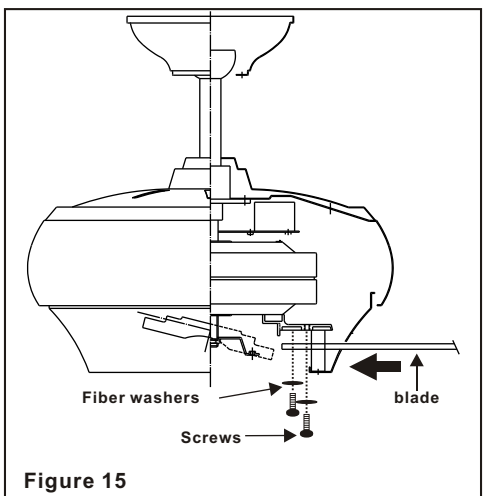

Figure 15

8. Installing the light plate

Step 1. Remove 1 of 3 screws from the mounting ring and loosen the other 2 screws. (Do not remove)

Step 2. Raise and hold the light plate close to the mounting ring and proceed to do the wire connections. Connect the white wire connector from the light kit and fan, follow the same procedure with the black wire connectors. (Fig. 16)

Step 3. Place the light plate key holes over the 2 screws previously loosened from the mounting ring, turn light plate until it locks in place at the narrow section of the key holes. Secure by tightening the 2 screws previously loosened and the one previously removed. (Fig. 16).

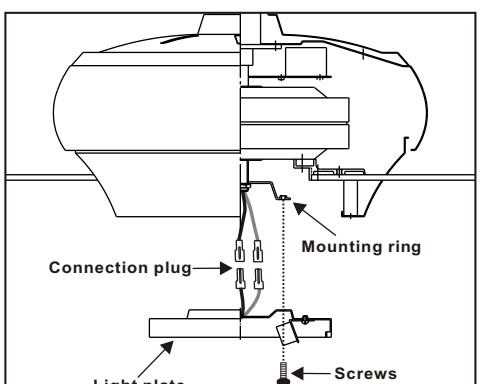

Figure 16

9. Installing the light bulb and glass shade

WARNING: Shut off the power supply before removing or replacing lamp. In handling of halogen bulb, care should be taken not to touch it with your bare hands. Oil residue will shorten the life of the halogen bulb. If you accidentally come into contact, wipe thoroughly with a clean, lint-free, cotton cloth. Allow the bulb to cool off for 10 minutes before changing the bulb. Use light bulb in accordance with the fan's specification. **TO REDUCE THE RISK OF FIRE DO NOT EXCEED MAXIMUM WATTAGE RATING.**

ATTENTION: The Energy Policy Act of 2005 requires this fan to be equipped with a 190 watt limiting device. If lamping exceeds 190 watts, the ceiling fan's light kit will shut off automatically.

Step 1. Install 100W halogen bulb (included). (Fig. 17).

Step 2. Raise glass shade up against the light plate and secure it to fan by twisting glass clockwise until snug. DO NOT OVERTIGHTEN. (Fig. 17)

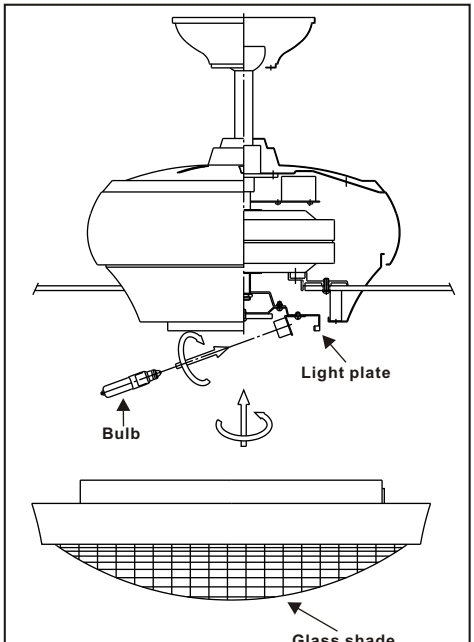

Figure 17

Installing the battery:

Install 9 volt battery (not included), to prevent damage to transmitter, remove the battery if not used for long periods.

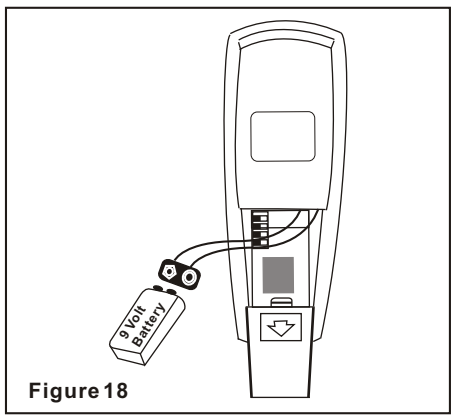

Figure 18

Restore power to ceiling fan and test for proper operation.

1. " **LO, MED, HI**" buttons:
   These three buttons are used to set the fan speed as follows:
   LO= Low speed **MED**= Medium speed
   HI= High speed

2. "**FAN OFF**" button:
   This button turns the fan off.

3. The "**LIGHT/DIMMER**" button turns the light ON or OFF and also controls the brightness setting. Press and release the button to turn the light ON or OFF. Press and hold the button to set the desired brightness. The light key has an auto-resume, it will stay at the same brightness as the last time it was turned off.

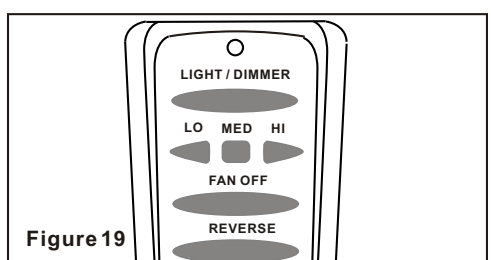

Figure 19

4. The "**REVERSE**" button is used to set the fan forward or reverse, press the button forward (for warm weather) or reverse (for cool weather):

Speed settings for warm or cold weather depend on factors such as room size, ceiling height and number of fans, etc.

NOTE: To operate the reverse function on this fan, press the reverse button while the fan is running.

Warm weather - (Forward) A downward air flow creates a cooling effect as shown in Figure 23. This allows you to set your air conditioner on a higher setting without affecting your comfort.

Cool weather - (Reverse) An upward airflow moves warm air off the ceiling area as shown in Figure 24. This allows you to set your heating unit on a lower setting without affecting your comfort.

Operating the Transmitter 10.

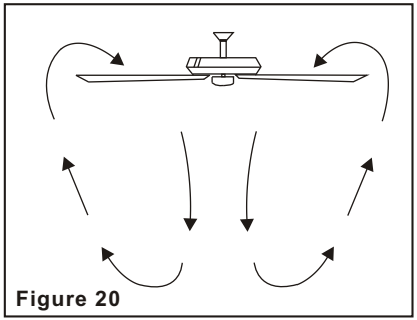

Figure 20

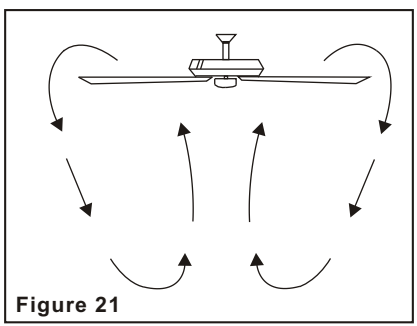

Figure 21

Here are some suggestions to help maintain your fan.

1. Because of the fan's natural movement some connections may become loose. Check the support connections, brackets and blade attachments twice a year. Make sure they are secure. (It is not necessary to remove fan from the ceiling).

2. Clean your fan periodically to help maintain its new appearance over the years. Use only a soft brush or lint free cloth to avoid scratching the finish. Plated finishes are sealed with lacquer to minimize discoloration or tarnishing. Do not use water when cleaning, this could damage the motor, wood blades or possibly cause an electrical shock.

3. If your fan is provided with wood veneer blades; you can apply a light coat of furniture polish for additional protection and enhanced beauty. Cover small scratches with a light application of shoe polish.

4. Use a lint free lightly damp cloth or duster to remove dust from the blades.

5. There is no need to oil your fan. The motor has permanently lubricated bearings.

6. If your fan is provided with glass shades, clean with lukewarm soapy water and a soft cloth or sponge. DO NOT IMMERSE GLASS SHADES IN HOT WATER. DO NOT PUT GLASS SHADES INTO AN AUTOMATIC DISHWASHER.

WARNING: Make sure the power is off at the electrical panel box Before you attempt any repairs. Refer to the section, "Making Electrical Connections".

11. Care of Your Fan

Problem	Solution
Fan will not start.	1. Check circuit fuses or breakers. 2. Check line wire connections to the fan and switch wire connections in the switch housing. **CAUTION**: **Make sure main power is off.** 3. Check to make sure the dip switches from the transmitter and receiver are set to the same frequency.
Fan sounds noisy.	1. Make sure all motor housing screws are snug. 2. Make sure the screws that attach the fan blade bracket to the motor hub is tight. 3. Make sure wire nut connections are not rubbing against each other or the interior wall of the switch housing. **CAUTION**: Make sure main power is off. 4. Allow a 24-hour "breaking-in" period. Most noise associated with a new fan disappear during this time. 5. If using an optional light kit, make sure the screws securing the glassware are tight. Check that the light bulb is also secure. 6. Do not connect the fan with a wall mounted variable speed control (s) 7. Make sure the upper canopy is a short distance from the ceiling. **It should not touch the ceiling.**
Remote control malfunction.	1. Do not connect the fan with a wall mounted variable speed control (s). 2. Check to make sure the dip switches from the transmitter and receiver are set to the same frequency.
Lights shut off and will not come back on.	1. This unit is equipped with a wattage limiting device. Lamping in excess of 190 watts will disable your ceiling fan's light kit. To reset your light kit you must turn the power off and re lamp, keeping the wattage under 190 watts. Restore power to your ceiling fan and continue normal operation.
Fan Wobble.	**NOTE:** All blade sets are grouped by weight. Because wood and plastic blades vary in density, the fan may wobble even though blades are matched. 1. Make sure all blade attachment screws are tight. 2. Make sure Outlet box is secured to building structure, if necessary use the wood screws provided to further secure outlet box to joist. 3. Make sure Hanger Bracket is secure to the outlet box, screws are tight. 4. Use the balancing kit provided if the wobble is excessive (follow instructions included with balancing kit)

Fan Size	Speed	Volts	Amps	Watts	RPM	CFM	N.W.	G.W.	C.F.
54" (137 cm)	Low	120	0.35	17	64	1510	12.49 kgs (27.50 lbs)	14.7 kgs (32.37 lbs)	2.82'
	Medium	120	0.48	36	103	2766			
	High	120	0.57	68	148	4150			

These are typical readings. Your actual fan may vary. They do not include Amps and Wattage used by the light kit.
